

NATHAN ONIMIYA · PROOF PORTFOLIO · 2026

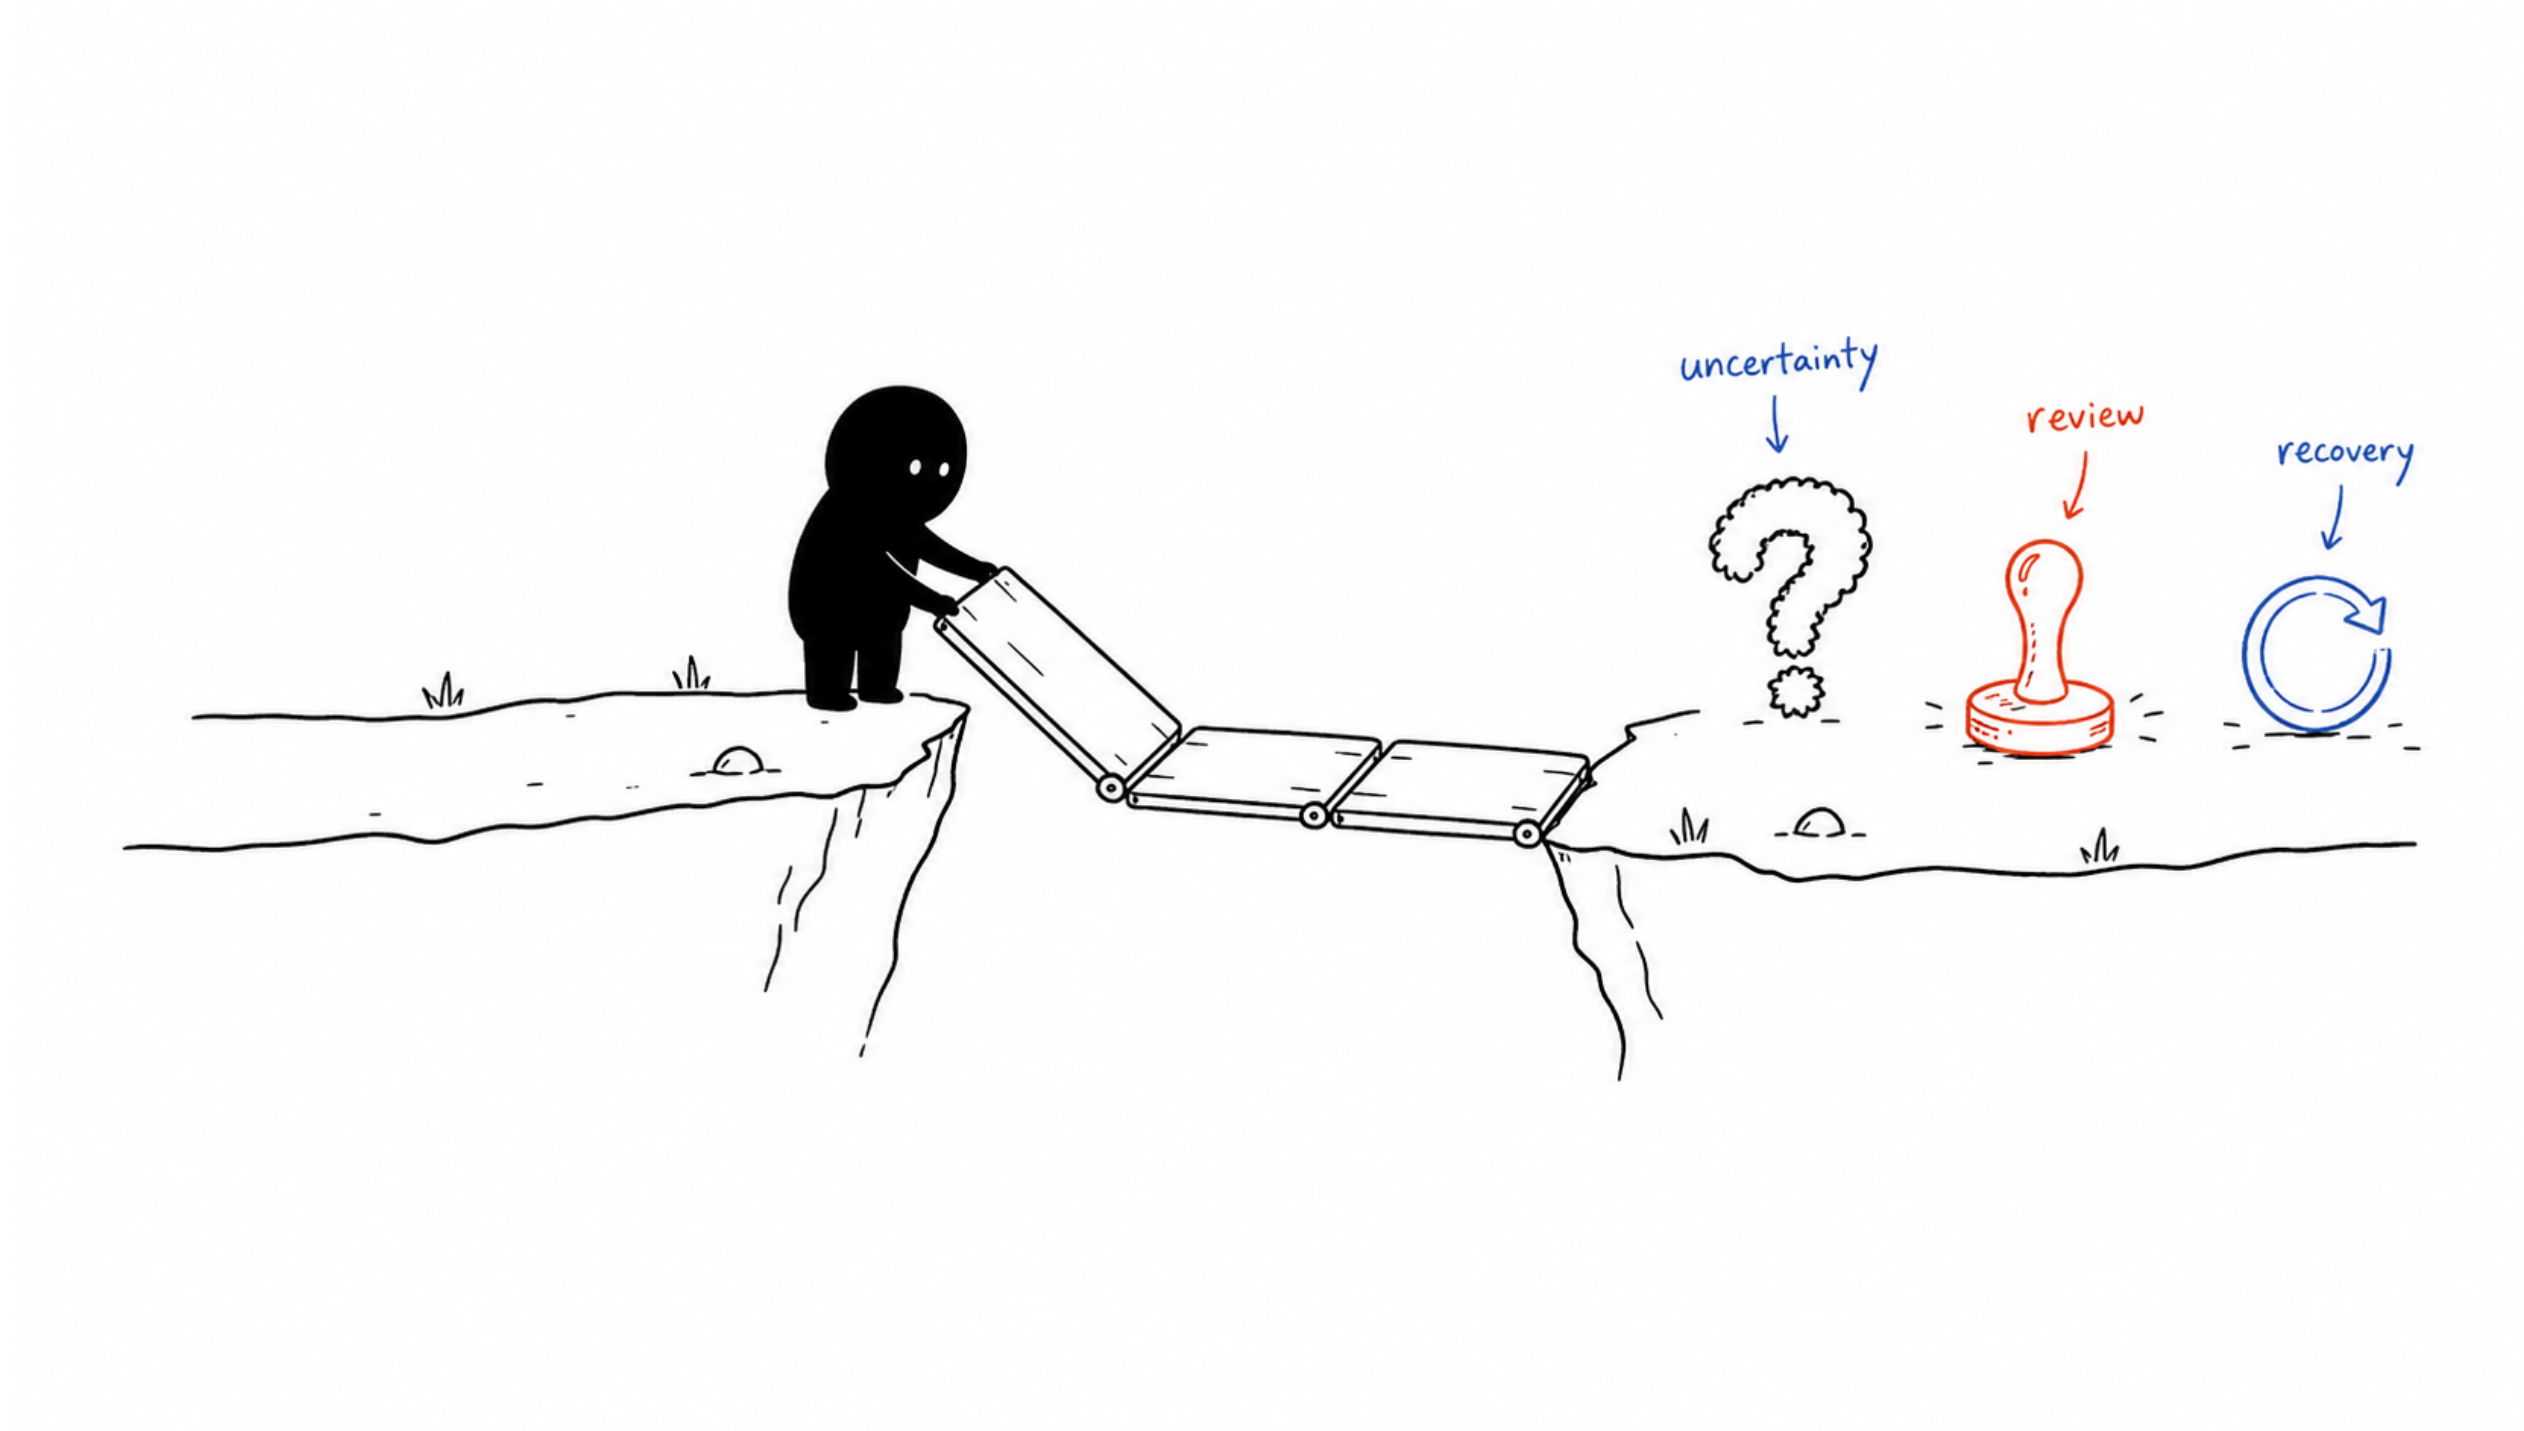

AI PRODUCT DESIGN + ENGINEERING

I design the behaviour. Then build the system.

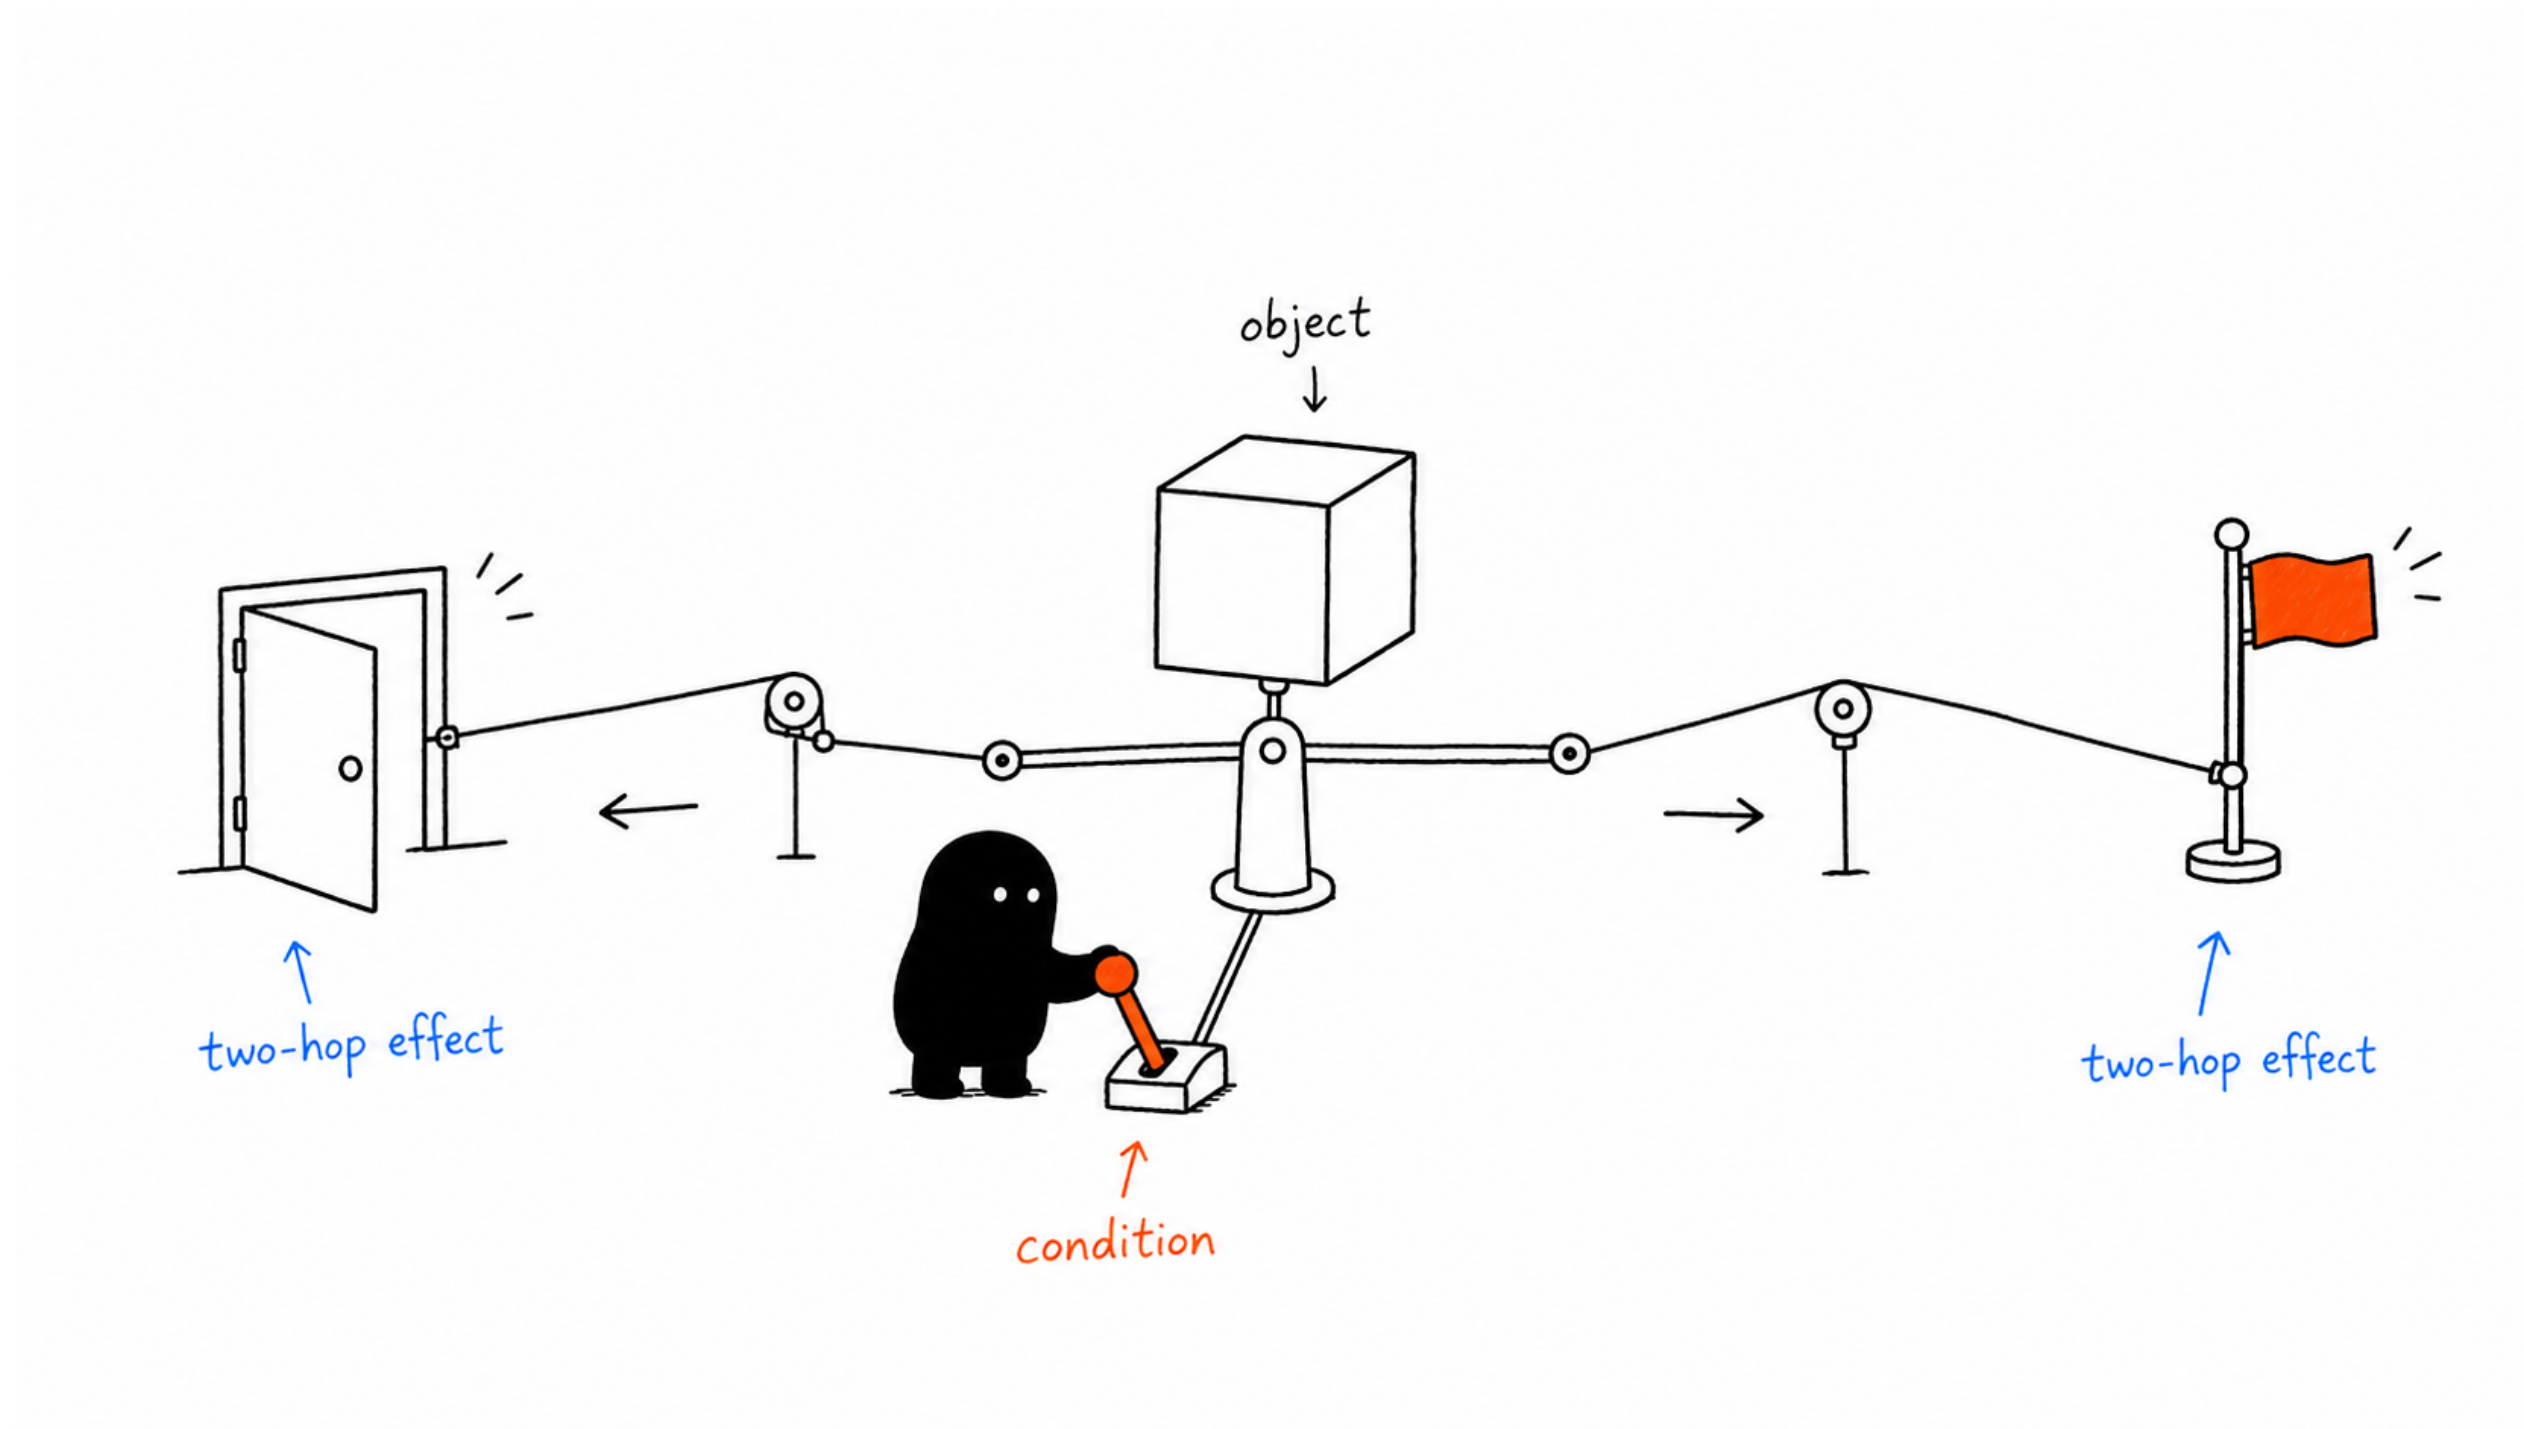

A proof portfolio in object-oriented UX, source-grounded AI and reviewable action systems.

OBJECTS · EVIDENCE · ACTIONS · SHIPPED IN CODE

AI product design starts where the happy path ends.

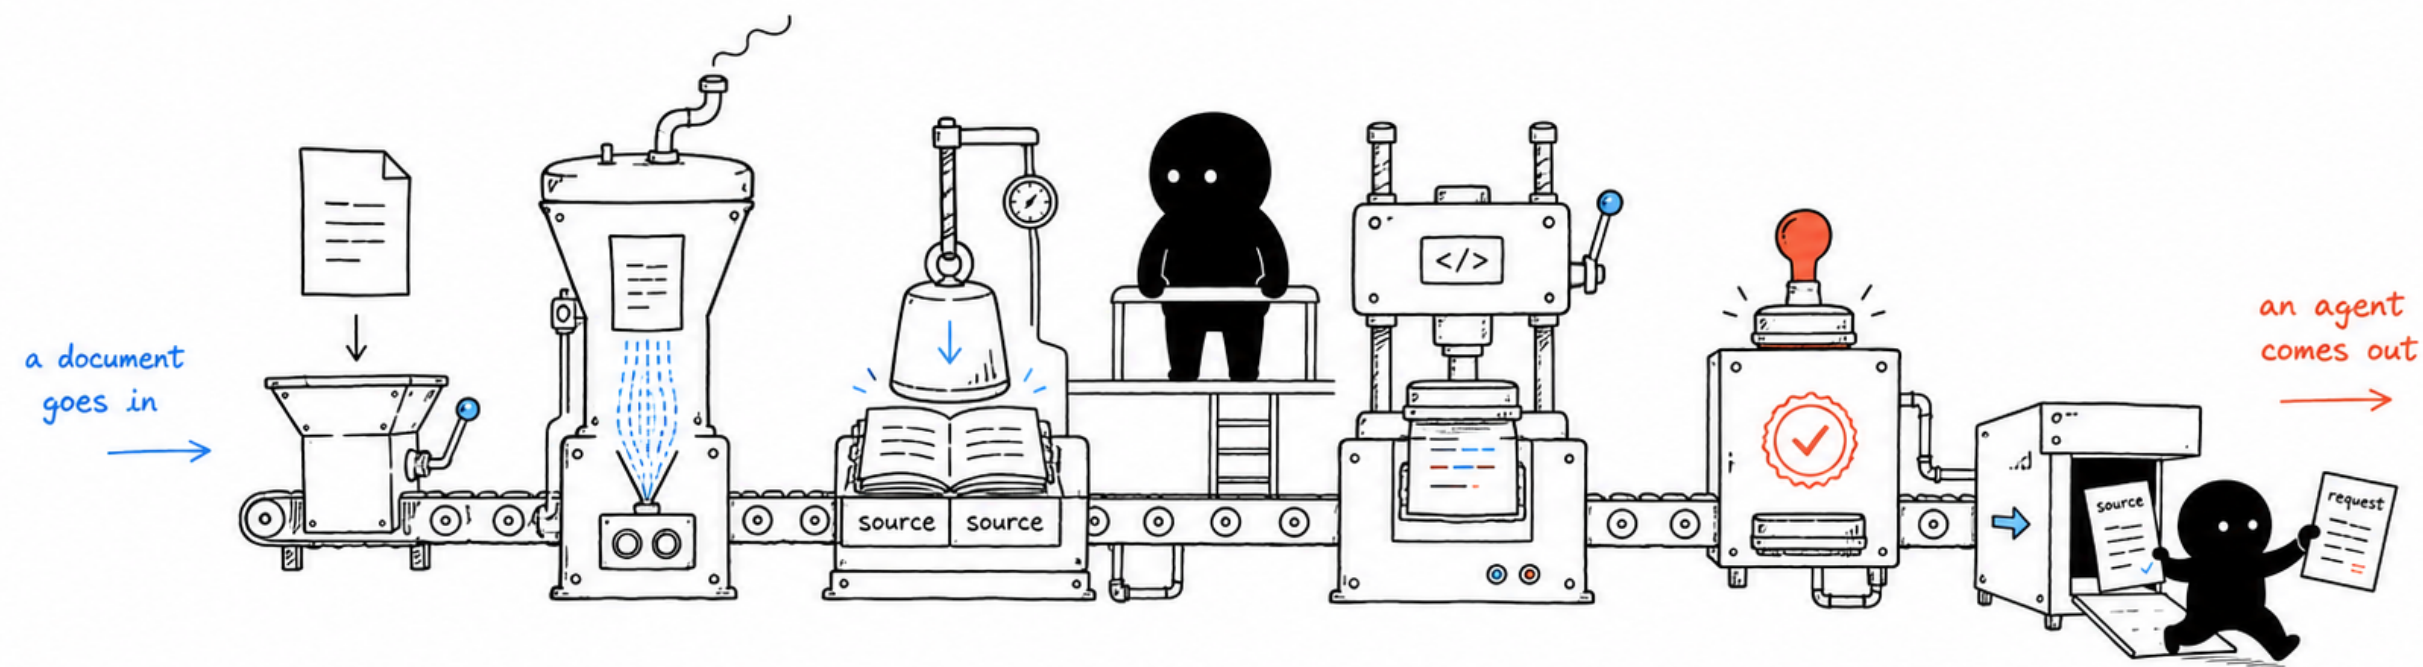

State should not hide inside screens.

 I model the object, its conditions and the two-hop effects before I decide what the screen looks like.

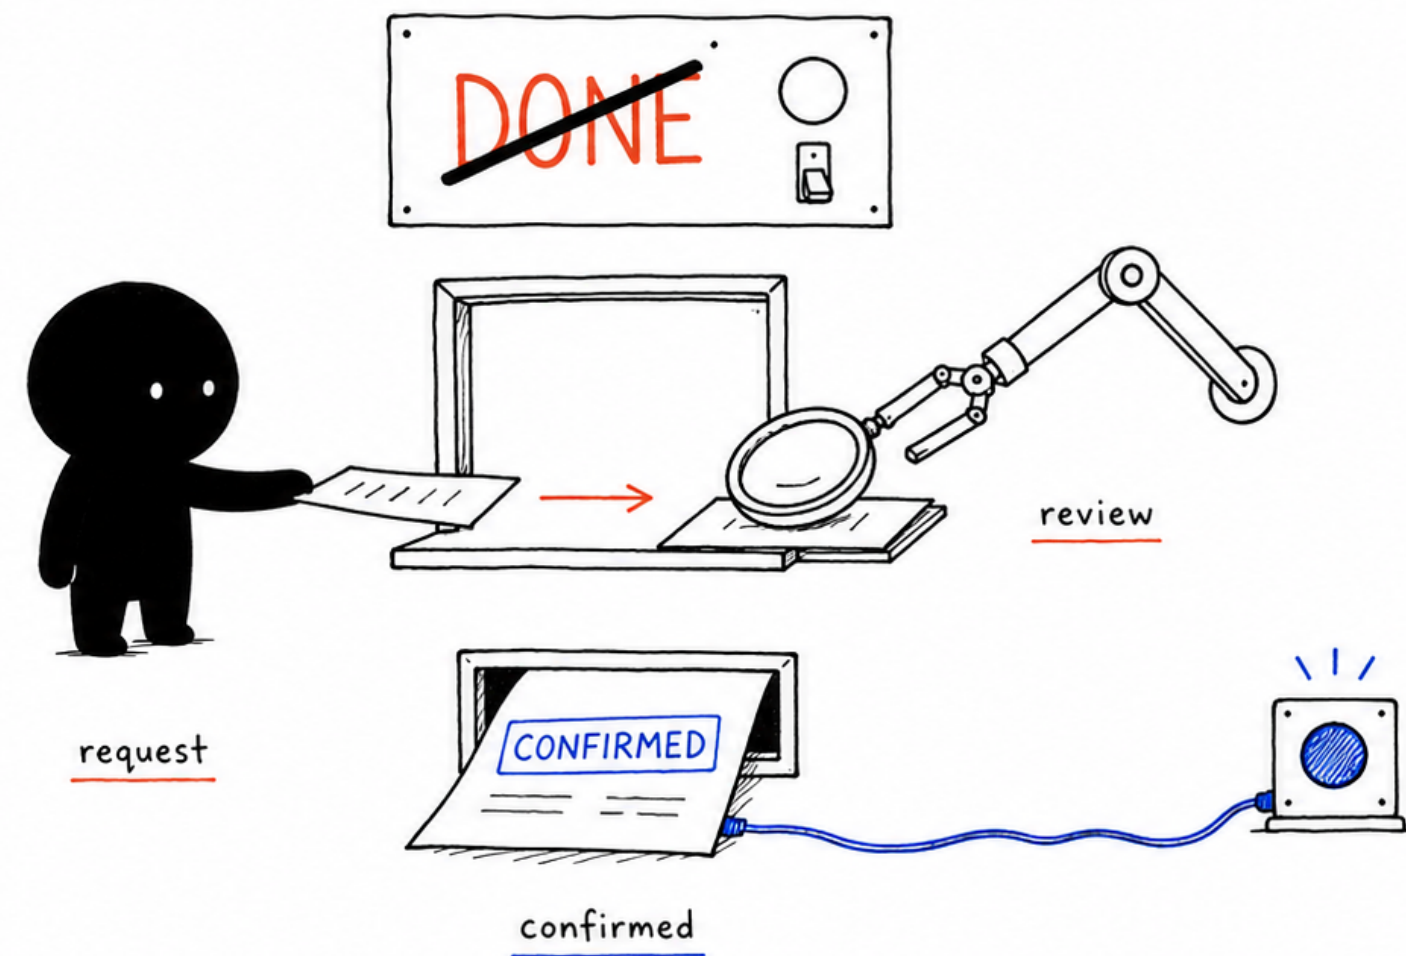

A document becomes an agent through a visible, testable line.

Every answer should carry its receipts.

A tool call is not a completed action.

 The system may draft and request; only external confirmation earns the word done.

Give me the ambiguous AI problem. I'll make it operable.

I work from object and state, through evidence and review, into coded interaction and tested delivery.
